SUMMARY

Backend Developer with 2+ years of experience designing and developing scalable REST APIs, authentication systems, business workflows, and database-driven applications using Node.js, Express.js, TypeScript, MySQL, MongoDB, PostgreSQL, and Firebase. Experienced in building ERP systems, role-based access control, real-time communication systems, and backend services for enterprise applications.

TECH. SKILLS

Backend: Node.js, Express, Typescript, REST APIs, WebSockets, Authentication & Authorization, RBAC, JWT, Swagger, Postman.

Database: MySQL, MongoDB, Firebase, PostgreSQL.

Frontend: Angular, JavaScript, HTML, CSS, SCSS, TailwindCSS, NgRx (State Management), Angular Material, Bootstrap.

Tools: Git, GitHub, Postman, Swagger.

Practices: Agile, Leadership, Strong Communication, collaborative, Problem-solving, MVC Architecture, Adaptive

EDUCATION

Bachelor of Information Technology

Gujarat Technological University • Gujarat • 2024 (Distinction)

Participated in academic projects and coding competitions, enhancing technical and analytical skills early on.

EXPERIENCE

Backend Developer / Full Stack Developer (Internship + Full-Time)

Nexotips Infotech – India

January 2024 - Present,

Led a team of 3 developers in delivering scalable Node.js and Angular solutions for clients across the USA and Europe, improving development efficiency through workflow automation and optimized backend processes.

Designed and developed RESTful APIs, authentication modules, and business workflows for enterprise applications using Node.js, Express.js, and TypeScript.

Built and maintained backend systems for projects such as FindAHunt, Textile Manage, NextDev, Market for Home, and Nexcount, focusing on scalability, security, and performance.

Implemented secure authentication mechanisms, role-based access control (RBAC), and API authorization to ensure controlled access to application resources.

Designed and integrated database solutions using MySQL, MongoDB, PostgreSQL, and Firebase, ensuring efficient data management and optimized query performance.

Developed real-time communication features using WebSockets and integrated third-party services such as payment gateways, notifications, and cloud messaging.

Collaborated with frontend developers and stakeholders to define API contracts, system architecture, and deployment strategies.

Created and maintained API documentation using Swagger and tested endpoints using Postman to ensure reliability and maintainability.

Participated in the complete software development lifecycle, including requirement analysis, backend development, testing, deployment, and production support.

PROJECTS

NexDev – Developer Portal / Internal Management Platform | 7 Months

Backend Developer | Node.js, Express.js, TypeScript, MySQL, REST APIs, Authentication, RBAC

- Designed and developed RESTful APIs for managing developer workflows, user roles, and project operations.
- Implemented JWT-based authentication and Role-Based Access Control (RBAC) to secure application resources.
- Optimized API performance through modular service architecture and efficient database interactions.
- Developed backend services supporting real-time data synchronization and project management workflows.
- Structured scalable application architecture following industry-standard backend development practices.
- Documented APIs using Swagger and performed endpoint testing using Postman.

Textile ERP – Inventory, POS & Workforce Management System | 8 Months

Backend Developer | Node.js, Express.js, TypeScript, MongoDB, REST APIs, Authentication System

- Designed and developed a full-scale ERP backend system managing inventory, POS, employee, and order workflows.
- Built RESTful APIs for billing, stock management, employee administration, and order tracking.
- Implemented transaction handling and invoice generation logic for POS operations.
- Designed and optimized database schemas to reduce redundancy and improve data consistency.
- Developed Role-Based Access Control (RBAC) for administrators, managers, and employees.
- Optimized database queries and API response times to improve overall system performance.
- Integrated authentication and authorization mechanisms to ensure secure business operations.

FindAHunt - Hotel Stay and hunting platform| 10 Months

Backend Developer | Node.js, Express.js, WebSockets, Stripe, Firebase

- Developed backend services supporting booking, communication, and hunting management workflows.
- Implemented WebSocket-based real-time messaging and collaboration features.
- Integrated Stripe payment gateway for secure payment processing and transaction management.
- Developed user authentication, authorization, and permission management systems.
- Designed scalable backend architecture capable of handling concurrent users and high-volume data operations.

Wallzy – 4K Live Wallpaper Mobile Application | 2 Months

Backend Developer | Node.js, Firebase, REST APIs, Media Management

- Designed backend workflows for managing large-scale media content including images and videos.
 - Built REST APIs for content upload, organization, moderation, and retrieval.
 - Implemented Firebase Cloud Messaging for automated daily notifications and user engagement.
 - Optimized media storage and retrieval mechanisms to reduce latency and improve application performance.
 - Developed scheduling and notification delivery systems ensuring reliable communication with users.
 - Maintained scalable backend architecture supporting continuous content updates and growth.
-
